Question

Question from Silas Mackey Suffolk Construction *on Tuesday, Feb 17, 2026 at 10:53 AM EST*

Reference is made to details 2 & 5 / S401, and detail 5/S0.05. Please provide a detail similar to 5/S0.05 for the interface of slurry wall to cap beam, but specifically at the (9) perimeter LBE's as they meet the cap beam. 5/S0.05 shows a straight dowel in the cap beam at every vertical with a DBS/DI configuration for slurry wall. Please confirm this would be similar at the LBE's in the slurry wall where LBE meets cap beam, and provide specific detail, including if the vertical reinforcement towards the center of the wall (as per 2/S4.01) also require a dowel in the cap beam.

Question from Silas Mackey Suffolk Construction *on Tuesday, Feb 17, 2026 at 10:53 AM EST*

Reference is made to details 2 & 5 / S401, and detail 5/S0.05. Please provide a detail similar to 5/S0.05 for the interface of slurry wall to cap beam, but specifically at the (9) perimeter LBE's as they meet the cap beam. 5/S0.05 shows a straight dowel in the cap beam at every vertical with a DBS/DI configuration for slurry wall. Please confirm this would be similar at the LBE's in the slurry wall where LBE meets cap beam, and provide specific detail, including if the vertical reinforcement towards the center of the wall (as per 2/S4.01) also require a dowel in the cap beam.

Awaiting an Official Response

LeM (2/20/2026):
All vertical reinforcing should continue into cap beam; however, hooks are not required at the top of the vertical reinforcing.
